Volume 14104

Proceedings of SPIE 0277-786X, V. 14104

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Machine Learning in Photonics II*, edited by Francesco Ferranti, Mehdi Keshavarz Hedayati, Andrea Fratalocchi, Proc. of SPIE 14104, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

NEUROMORPHIC COMPUTING I

14104 02 **All optical machine learning for noise-robust information processing** [14104-2]

INVERSE DESIGN I

14104 03 **Inverse design method for large-scale metalenses in reflection employing innovative deep neural networks envisioning future virtual reality applications** [14104-14]

14104 04 **Metasurface inverse design via latent space optimization** [14104-15]

INVERSE DESIGN II

14104 05 **Transformer-based inverse-design model for artificial electromagnetic materials** [14104-19]

14104 06 **Heuristic-initialized gradient descent for efficient inverse design of large-scale metasurfaces** [14104-20]

14104 07 **Learned manifold reparameterization for DRC-compatible inverse design in silicon photonics** [14104-21]

INVERSE DESIGN III

14104 08 **High-accuracy partial differential equation solutions with hybrid solvers (SPIE Best Student Paper Award)** [14104-28]

OPTICAL NETWORKS

14104 09 **Performance and complexity tradeoffs of neural network equalizers in intensity-modulation direct-detection optical systems (Invited Paper)** [14104-29]

14104 0A **Photonic structures as amplitude-modulating weights in analogue neural networks for Edge AI** [14104-30]

PHOTONIC COMPUTING II

- 14104 0B **The many faces of photonic reservoir computing (Invited Paper)** [14104-34]
- 14104 0C **Ultrafast optical computing in dispersive few-mode fibers: an extension to nonlinear tasks** [14104-39]
- 14104 0D **Reconfigurable deep photonic recurrent networks for optoelectronic information processing** [14104-40]

IMAGING

- 14104 0E **A compact physics-informed deep learning framework for accurate quantitative phase imaging** [14104-42]
- 14104 0F **Physics-derived synthetic training of deep learning models for rapid characterization of perovskite solar cells via accelerated hyperspectral imaging** [14104-44]

MACHINE LEARNING AND PHOTONICS: ACROSS DOMAINS

- 14104 0G **Physics-informed neural surrogates for real-time inference of nanostructure evolution from time-resolved x-ray scattering** [14104-46]
- 14104 0H **Gradient-manifold alignment scheduling for physics-guided diffusion** [14104-47]

POSTER SESSION

- 14104 0I **Deep learning-enhanced magneto-optical rotation device in the Voigt geometry** [14104-51]
- 14104 0J **Chiral metasurface optimization using a genetic algorithm and a neural-network-based approach** [14104-52]
- 14104 0K **Inverse designing Si metamaterials using tensorised image generator** [14104-54]
- 14104 0L **Unwrapping photonic reservoirs: enhanced expressivity via random Fourier encoding over stretched domains** [14104-56]
- 14104 0M **Machine learning-based prediction of net transmission for bend optical waveguides in digital applications** [14104-57]
- 14104 0N **Parallel photonic computing with disordered scattering media** [14104-58]
- 14104 0O **Photonics-enhanced machine learning for intelligent urban traffic management** [14104-59]

- 14104 0P **Physics-guided world models for long horizon electromagnetic dynamics under partial observability** [14104-61]
- 14104 0Q **Active search generation for nanophotonic design in the small data regime** [14104-62]
- 14104 0R **Predicting power conversion efficiency of luminescent solar concentrators using artificial neural networks** [14104-63]
- 14104 0S **Integrated photonic transceiver for delocalized deep learning** [14104-66]
