# TABLE OF CONTENTS

|                                                                                                                                                                                    |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Early Pedagogical Insights from using AI Tutor Agents in a Graduate-level Systems Course .....                                                                                     | 1  |
| <i>Varad Kulkarni, Nikhil Reddy, Yogesh Simmhan</i>                                                                                                                                |    |
| Analyzing Communication Performance From Testbeds to HPC Systems: A Lab Course .....                                                                                               | 5  |
| <i>Harasees Kaur, Sankalp Shashi, Umesh Konduru, Sahil Kumar, Balwinder Sodhi, Jagpreet Singh<br/>B.S. Sanjeev</i>                                                                 |    |
| EduGenAI: A Framework for Generative AI in Computational Science Education .....                                                                                                   | 9  |
| <i>Vijayalakshmi Saravanan, Tamil Lakshman</i>                                                                                                                                     |    |
| Pedagogical Insights, Impact, and Recommendations from User Trainings in Scientific Computing<br>Under the National Supercomputing Mission .....                                   | 18 |
| <i>Nisha Agrawal, Paramita Ghosh, Rahul Dethé, Subhojeet Das, Ashish Nayak</i>                                                                                                     |    |
| Towards a Programming-Free, Hands-On Introduction to Concepts in High-Performance and Cloud<br>Computing for First-Year University Students .....                                  | 26 |
| <i>Prasun Dewan, Samuel George, Yuvraj Jain, Mason Laney</i>                                                                                                                       |    |
| Student Challenges in Scientific Computing: Insights from EUMaster4HPC Organization and Execution .....                                                                            | 34 |
| <i>Ezhilmathi Krishnasamy, Dirk Pleiter, Pascal Bouvry</i>                                                                                                                         |    |
| Integrating Research into High Performance Computing Education via Particle-in-Cell Simulations .....                                                                              | 41 |
| <i>Libin Varghese, Ayushi Sharma, Bhaskar Chaudhury</i>                                                                                                                            |    |
| Design of an Interactive GPU-Accelerated Visualization Tool for Teaching Parallel Algorithms .....                                                                                 | 45 |
| <i>Tanjila B, Deepti H G</i>                                                                                                                                                       |    |
| Efficient AI-driven Subsurface Modeling: A Case Study on Scaling and Optimization .....                                                                                            | 49 |
| <i>Mitali Sinha, Yogesh Nakhate, S. Ahmad Zamanian</i>                                                                                                                             |    |
| PEEP: A Tool for PErformance Effect Prediction .....                                                                                                                               | 54 |
| <i>G. Ramya Sri, Debiprasanna Sahoo, Ajaya Kumar Dash</i>                                                                                                                          |    |
| Enabling Distributed Deep Learning frameworks on Trinetra-A Network .....                                                                                                          | 59 |
| <i>Shruti Sharma, Rakesh Kumar Yadav, Yogeshwar Sonawane, Sanjay Wandhekar</i>                                                                                                     |    |
| Communication-Centric UALink and NVLink Comparison for Large Scale AI Training .....                                                                                               | 63 |
| <i>Sai Krishna Vemuri, Ajay Joshi, Vijay Kumar Motagi, Rohit Sindhu, Venkata Ravi Shankar Jonnalagadda<br/>Amandeep Singh, Praveen Kumar Rukmangada, Sachin Shaw, Vishal Tanna</i> |    |
| Evaluating CXL Memory Pooling for Scalable LLM Inference .....                                                                                                                     | 70 |
| <i>Sai Krishna Vemuri, Venkata Ravi Shankar Jonnalagadda, Ajay Joshi, Rohit Sindhu, Vijay Kumar Motagi<br/>Amandeep Singh, Praveen Kumar Rukmangada, Sachin Shaw, Vishal Tanna</i> |    |
| Quantitative Evaluation of Hazard Mitigation Strategies in a 5-Stage RISC-V Pipeline: A<br>Benchmark-Driven Analysis Using Fibonacci and Prime Sieve .....                         | 75 |
| <i>Kushagra Agrawal, Anindita Basak, Abhishek Raj, Aakarsh Singh</i>                                                                                                               |    |
| Porting an Enterprise Linux Distribution to Custom RISC-V Hardware: A Rocky Linux Case Study .....                                                                                 | 83 |
| <i>Surendra Billa, Rushikesh Jadhav, Rutuja Sandbhor, Yogeshwar Sonawane, Sanjay Wandhekar</i>                                                                                     |    |

|                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Performance Evaluation of AI Inference on the Tenstorrent Wormhole RISC-V Accelerator .....                                                | 90  |
| <i>Kishor Yerol Damodaran, Abhishek Patel, Krishan Gopal Gupta, Shashank Sharma, Samrit Kumar Maity<br/>Sanjay Wandhekar</i>               |     |
| Neuromorphic Adaptive Precision RISC-V Processor with Real-Time Precision Scaling and Neuronal<br>State Management .....                   | 98  |
| <i>Om Maheshwari, Sahil Maurya, Bikram Paul</i>                                                                                            |     |
| RISC-V Based SoC Design Featuring Fixed and Floating Point Units with Integrated FFT Accelerator<br>for DSP Workloads .....                | 106 |
| <i>Umer Kudachi, Saroja V. Siddamal, Shreevatsa Alawandi, Aishwarya Beedanal</i>                                                           |     |
| Hardware-Software Co-Design of Post-Quantum FALCON Digital Signature Scheme with RISC-V .....                                              | 114 |
| <i>Rishabh Shrivastava, Utsav Banerjee</i>                                                                                                 |     |
| Performance Analysis of Compiler Code Generation for HPC and AI Kernels on RISC-V .....                                                    | 121 |
| <i>Rama Kishan Malladi, Nitya Hariharan</i>                                                                                                |     |
| An Efficient and Well-Benchmarked Multi-Orbital Impurity Solver for Predictive Investigations of<br>Correlated Materials .....             | 125 |
| <i>Gurshidali Palakal, N. S. Vidhyadhiraja</i>                                                                                             |     |
| Finite-element methods for noncollinear magnetism and spin-orbit coupling in real-space<br>pseudopotential density functional theory ..... | 127 |
| <i>Nikhil Kodali, Phani Motamarri</i>                                                                                                      |     |
| On-the-Fly Machine Learning Interatomic Potential for Bulk PdH: Assessing Accuracy and Efficiency .....                                    | 129 |
| <i>Poonam Parkar, Sudarshan Vijay, Abhijit Chatterjee</i>                                                                                  |     |
| Multiscale Modelling of Metal-Organic Chemical Vapour Deposition (MOCVD) Process for GaAs<br>growth .....                                  | 131 |
| <i>Hrishi Viral Harsora, Soham Sinha, Tarun Kumar Agarwal</i>                                                                              |     |
| Integrating DFT-FE with ASE via a High-Performance Socket Interface .....                                                                  | 133 |
| <i>Mehul Darak, Kartick Ramakrishnan, Phani Motamarri</i>                                                                                  |     |
| Real-space finite-element methods and algorithms for DFT calculations in the exascale era using<br>projector augmented wave method .....   | 135 |
| <i>Kartick Ramakrishnan, Phani Motamarri</i>                                                                                               |     |
| Generation of Novel Silicon Crystal Structure with Minima Hopping and Generative Model .....                                               | 137 |
| <i>Abhishek Ojha, Sudarshan Vijay</i>                                                                                                      |     |
| Efficient methods for ab initio modelling of materials using finite-element DFT with meta-GGA<br>functionals .....                         | 139 |
| <i>Srinibas Nandi, Phani Motamarri</i>                                                                                                     |     |
| Tuning PLGA Properties for Drug Delivery Optimization through Computational Simulation .....                                               | 141 |
| <i>Chandan Prasad Sahoo, Prateek K. Jha</i>                                                                                                |     |
| A Novel Method for Efficiently Computing Ewald Summation for Ionic Slab Geometries .....                                                   | 143 |
| <i>Prateek Kumar Pandey, Vishal Agarwal, Swarnendu Biswas</i>                                                                              |     |
| Agentic AI Meets RAG: A Framework for Domain-Specific Knowledge Evaluation .....                                                           | 145 |
| <i>Vijay Kumar K, Abirami A M, Uma K V, Viswanath V S</i>                                                                                  |     |

|                                                                                                                                     |     |
