# TABLE OF CONTENTS

|                                                                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Compact Hybrid Convolutional–Attention Network with Multiscale Patch Processing for Hyperspectral Image Denoising .....                                        | 1   |
| <i>Member Joy Usigbe, Priyanka Dahiya, Christopher Kucha, Rammohan Mallipeddi</i>                                                                              |     |
| A GAN-Based MoE-Style High-Fidelity Pose Transfer Model with Step-Wise Mechanism .....                                                                         | 5   |
| <i>Lili Yin, Ze Zhao, Jie Gao, Shuaijie Wang, Yunze Xie, Yuehan Wang</i>                                                                                       |     |
| A Multi-Level Morphology and Rule-Guided Unsupervised Segmentation Method for Industrial Automotive Brake Calipers .....                                       | 14  |
| <i>Ronghui Sun, Xiaohu Liu</i>                                                                                                                                 |     |
| PeH-LAA: Fine-Grained Open Source License Attitude Analysis Method Based on Parameter-Efficient Hierarchical Attention Networks .....                          | 22  |
| <i>Rulin Xie, Xin Zhao, Jing Wang, Yi Ren</i>                                                                                                                  |     |
| Counting Characters: A Comprehensive Benchmark for Evaluating Character-Level Understanding in Large Language Models .....                                     | 29  |
| <i>Yuyang Zeng, Yuqi Yi</i>                                                                                                                                    |     |
| Feature Mining and Frequency Prediction for High-Frequency Vocabulary in Postgraduate Entrance English Examinations Based on ES-BiLSTM .....                   | 38  |
| <i>Yanqin Zhou, Xuyang Lv, Lunkang Ye, Chengyou He</i>                                                                                                         |     |
| Physics-Informed Neural Networks for Solving the Eikonal Equation: Frontier Methods and Applications .....                                                     | 45  |
| <i>Bowen Zhang, Tao Song, Cunji Zhao</i>                                                                                                                       |     |
| Research on Video Summarization Methods Based on Spatio-Temporal Attention and LSTM Fusion .....                                                               | 54  |
| <i>Ruilin Guo, Xiangyang She</i>                                                                                                                               |     |
| A Digital Twin-Driven Improved MADDPG Multi-Robotic-Arm Cooperative Control Method .....                                                                       | 61  |
| <i>Yi Liu, Peng Wang, Jie Huang, Chunxia Jia</i>                                                                                                               |     |
| Research on Anomaly Detection Methods in Power Marketing Based on Rule-Driven and Data-Driven Fusion .....                                                     | 68  |
| <i>Caihong Ren, Dadi Wang, Qingbo Peng, Zhenglin Li, Qi Huang</i>                                                                                              |     |
| Malware Deep Analysis and Network Security Defense Mechanism Based on Multimodal Data Fusion .....                                                             | 75  |
| <i>Jiaxing Zhou, Wenming Su, Xiaoqi Zhang</i>                                                                                                                  |     |
| Robust and QoS-Aware Pricing for Large Model-as-a-Service: A Hierarchical Stackelberg Game Approach .....                                                      | 83  |
| <i>Yukai Su, Bangbang Ren</i>                                                                                                                                  |     |
| CorDet-3H: A Physics-Aware Data Augmentation and Multi-Scale Dynamic Perception Framework for Corrosion Detection in Aerospace “Three-High” Environments ..... | 96  |
| <i>Yao Feng, Yingwen Chen, Wenbo Shi, Mingyang Geng</i>                                                                                                        |     |
| Assistant Diagnosis of Glaucoma Optimizing Subtle Lesion Detection and Multi-Scale Feature Extraction .....                                                    | 104 |
| <i>Hongkai Zhang, Chao Ma, Chao Li</i>                                                                                                                         |     |

|                                                                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| UAV-Based Bolt Diameter Measurement via 3D Point Cloud and RGB Images .....                                                                                        | 112 |
| <i>Kuixiang Xiong, Zhejing Bao, Wenjun Yan</i>                                                                                                                     |     |
| T2I-DiT: An Efficient and Controllable Transformer Diffusion Model for Text-to-Image Generation .....                                                              | 120 |
| <i>Zhen Li, Haopeng Lei, Hao Yin, Bokang Cheng</i>                                                                                                                 |     |
| Research on Sea Surface Wind Fields Based on Generative Adversarial Networks .....                                                                                 | 128 |
| <i>Dingqi Zhang, Qifeng Jiang, Weibin Zhang, Licheng Gu, Junlin Zhang</i>                                                                                          |     |
| Comparative Study on Aqueous Solubility Prediction of Organic Molecules Based on Multi-Feature Fusion and Machine Learning .....                                   | 135 |
| <i>Jiarui Zhang</i>                                                                                                                                                |     |
| A Key Node Identification Method by Combining Attribute-Based Random Walk and Graph Neural Networks .....                                                          | 143 |
| <i>Yi Chen, Fan Yang, Jian Xie, Ziwei Tao</i>                                                                                                                      |     |
| FedTriad: A “Self-Peer-Global” Trust Triangle for Federated Learning Backdoor Defense .....                                                                        | 151 |
| <i>Yini Dong</i>                                                                                                                                                   |     |
| Evidence-Driven Chain-of-Thought Prompting with Multi-Dimensional Evidence Evaluation for Medical Question Answering .....                                         | 158 |
| <i>Zezhou Xu</i>                                                                                                                                                   |     |
| ReLoX: Enhancing Reasoning in Small Language Models with Task-Specific LoRA Experts .....                                                                          | 165 |
| <i>Ziyi Zhu</i>                                                                                                                                                    |     |
| A Multi-Channel CNN for Complete Half-Octave Hearing Threshold Prediction Using Joint Otoacoustic Emissions .....                                                  | 172 |
| <i>Hongyu Huang, Qin Gong</i>                                                                                                                                      |     |
| A Lightweight Detection Model Based on Improved Yolov11 for Aero-Engine Surface Defect Inspection .....                                                            | 178 |
| <i>Xiaoxiao Xu, Yafeng Wu, Guocan Lu, Zijun Cheng</i>                                                                                                              |     |
| Precise and Automatic HMD-to-Tracker Calibration for Mixed Reality Surgical Navigation via Hybrid PnP-Depth Fusion .....                                           | 185 |
| <i>Dongming Liang, Shiqi Lin, Shaowei Liao, Rongqian Yang</i>                                                                                                      |     |
| Automatic Classification of Chest X-Ray Diseases Based on Vision Transformer .....                                                                                 | 190 |
| <i>Shuhao Liang, Pengfei Chen, Tao Wu, Yunyun Dong</i>                                                                                                             |     |
| A Hybrid Geometric-Learning Framework for Dynamic Object Determination in RGB-D SLAM .....                                                                         | 195 |
| <i>Yu Bian, Mingwu Ren</i>                                                                                                                                         |     |
| Hierarchical Vision Transformer with Multi-Head Self-Attention for Automated Multi-Class Retinal OCT Image Classification: A Comprehensive Comparative Study ..... | 201 |
| <i>Gangkui He</i>                                                                                                                                                  |     |
| Visual Table Understanding: Methods, Challenges and Future Directions .....                                                                                        | 206 |
| <i>Fengjuan Zhang, Zhufeng Li, Gang Zhou, Jing Wang, Jicang Lu, Kaixiang Zhang</i>                                                                                 |     |
| Machine Vision-PLC Integrated High-Precision Target Positioning System Design .....                                                                                | 215 |
| <i>Ehui Lan, Xiaoli Hu</i>                                                                                                                                         |     |

|                                                                                                                          |     |
|--------------------------------------------------------------------------------------------------------------------------|-----|
| Improving the Small Object Detection Algorithm for UAV Aerial Images Based on Yolov12n .....                             | 222 |
| <i>Ling Wen, Caihong Ma, Shengzhou Ma</i>                                                                                |     |
| Intelligent Super-Resolution Fusion Method for Satellite and UAV Data Based on Differential Neural Networks .....        | 231 |
