| <i>01 - Solar Thermal Power</i> .....                                                                                                                                                                                                                                                                                                                               | 2   |
| Analytical and Experimental Investigation of Overall Heat Loss Coefficient<br>for Single Non-Evacuated Tube Solar Thermal Receiver<br>Saroj Kumar Singh, Kishan Konannawar, Shireesh B Kedare, S V Prabhu .....                                                                                                                                                     | 3   |
| Characterization of Bio-Based Phase Change Materials for Solar Energy<br>Applications<br>Thiago Torres Martins Rocha, Rafael Nunes da Paixao Nunes, Gabriel Damaceno Flauzindo dos<br>Santos, Felipe Lara Pinto, Paulo Vinicius Trevizoli .....                                                                                                                     | 15  |
| Characterization of the Welding Zone in Stainless Steels Used in CSP Plants<br>Under Static Corrosion Conditions With Molten Salts<br>Abdiel Mallico, Mauricio Teodoro Lague, Víctor Vergara, Grover Viracocha .....                                                                                                                                                | 24  |
| Characterization of Thermophysical Properties of Molten Salts Used in CSP<br>Plants Using the dT-History<br>Grover Jose Viracocha, Abdiel Mallico, Mauricio Teodoro Lague, Carlos Pérez .....                                                                                                                                                                       | 30  |
| Comparative Techno-economic Analysis of Molten Salt Versus Particle-based<br>Hybrid Pv-csp Plants With Electric Heaters and Sco2 Power Blocks<br>Salvatore Guccione, Rafael Guedez .....                                                                                                                                                                            | 36  |
| Decarbonizing Industrial Heat in Central Asia: A Case Study on Parabolic<br>Trough Collectors under Tashkent Conditions<br>Azizboy Khaitmukhamedov, Dilshod Jalilov, Oybek Abdulkhaev .....                                                                                                                                                                         | 40  |
| Design and Evaluation of a Novel Solar-Driven Sustainable Polygeneration<br>System Based on H2O-LIBR Working Fluid.<br>Javier Alejandro Hernández Magallanes, Diana de Santiago, Salvador Tututi-Ávila, K. C. Sanal .....                                                                                                                                           | 52  |
| Development of a Low-cost, Scalable Spherical Pcm Storage Using<br>Corrugated Pipes: Concept, Dimensioning and Prototype Design<br>Yannick Krabben, Pascal Gürber, William Orlando Delgado Diaz, Philipp Roos, Markus Diener,<br>Anastasia Stamatou, Jörg Worlitschek .....                                                                                         | 63  |
| Evaluation of Linear Fresnel Reflectors<br>Leonardo Faustino Lacerda Souza, Naum Fraidenaich, Chigueru Tiba, Ikaro Teles Bezerra dos<br>Santos Barreto .....                                                                                                                                                                                                        | 67  |
| Experimental Comparison of Two Specialized Cooking Pots During Partly<br>Cloudy Conditions Using Parabolic Dish Solar Cookers<br>Ashmore Mawire, Sunita Mahavar, Oyirwoth P. Abedigamba, Katlego Lentswe .....                                                                                                                                                      | 79  |
| For All Tanks Prone to Store Energy .....                                                                                                                                                                                                                                                                                                                           | 85  |
| Alfredo Angelillo, Walter Gaggioli, Primo Ascenzi, Valeria Russo .....                                                                                                                                                                                                                                                                                              |     |
| Hybrid Sensible-latent Heat Thermal Energy Storage for Concentrated Solar<br>Power Applications: Insights From the Cooperant Project<br>Adina Hochuli .....                                                                                                                                                                                                         | 97  |
| Hybrid System for Green Hydrogen Production Using Microbial Electrolysis<br>and Desalination Cells Coupled With Solar-Powered Glycerol Steam<br>Reforming<br>Jhoni Anderson Schembek Silva, Maria Clara Ribeiro Carvalho, Emanulle Lima Carneiro, Thaissa<br>Lorrany Alves de Sousa, Paulo Alexandre Costa Rocha, Fernanda Leite Lobo, Andre Valente<br>Bueno ..... | 100 |
| Impact of a Partial Solar Eclipse on the Direct Normal Irradiance and Flux<br>Distribution in a Solar Tower System<br>Ricardo Filipe Carrão Conceição, Jose Gonzalez-Aguilar, Manuel Romero, Germilly Reki Morais<br>Barreto .....                                                                                                                                  | 110 |
| Influence of Co <sub>2</sub> Conditioning Strategies on Thermochemical Energy Storage<br>Performance in Solar Power Towers<br>Freddy Nieto, Alberto de La de la Calle, Rodrigo Escobar .....                                                                                                                                                                        | 113 |

|                                                                                                                                                                                     |     |
