SPIE

Volume 14028

Proceedings of SPIE 0277-786X, V. 14028

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Real-Time Image Processing and Deep Learning 2026*, edited by Nasser Kehtarnavaz, Mukul V. Shirvaikar, Proc. of SPIE 14028, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

REAL-TIME DEEP LEARNING METHODS I

- 14028 02 **Attention-enhanced perceptual image anomaly detection for ultrasound imagery** [14028-1]
- 14028 03 **StarGAN V2: ultrasound image dataset augmentation using GAN** [14028-2]
- 14028 05 **Deep learning-based tumor detection in hyperspectral images using FPGA** [14028-4]

REAL-TIME IMAGE PROCESSING METHODS I

- 14028 06 **Stabilized semantically aware seam optimization for video stitching** [14028-5]
- 14028 09 **Dual digital image watermarking using Hadamard transform and JND for copyright protection** [14028-8]
- 14028 0A **Parallel visual encryption of digital images using discrete cosine transform and a non-repeating random permutation algorithm** [14028-9]

REAL-TIME DEEP LEARNING METHODS II

- 14028 0C **Detecting, localizing, and classifying photovoltaic solar panel surface defects using AI and edge IoT devices** [14028-11]
- 14028 0E **Real-time optical characterization of hypersonic vehicles using multispectral SWIR imaging and machine learning** [14028-13]
- 14028 0F **A graphical-user-interface for real-time autolabeling of defective IC markings** [14028-14]

REAL-TIME IMAGE PROCESSING METHODS II

- 14028 0G **FedTTA: enabling robust federated test-time adaptation in adverse weather for distributed surveillance** [14028-16]
- 14028 0H **Real-time tampering of video object detectors via inpainting and universal perturbations** [14028-17]

- 14028 OI **Single-shot demodulation for structured-illumination reflectance imaging in poultry quality assessment** [14028-18]
- 14028 OJ **AgriQFS: quantum-classical hybrid feature selection for cotton defoliation detection from temporal UAV imagery** [14028-19]
- 14028 OL **Physics-informed deep learning for real-time free-space optical beam diagnostics** [14028-21]

POSTER SESSION

- 14028 OM **Vision language model-based multimodal voice activity detection** [14028-22]
- 14028 ON **Intelligent electro-optical systems for scalable space surveillance** [14028-23]
- 14028 OP **Parallel authentication of digital speech files using perceptual hashing of spectral features** [14028-26]
- 14028 OQ **Multimodal prompt adaptation for fast text-guided object detection** [14028-27]
- 14028 OR **FlyWars: an autonomous low-latency system for adaptive laser-based pest management** [14028-28]

DIGITAL POSTER SESSION

- 14028 OU **Algorithm for automated alignment and search of contact areas on semiconductor wafers** [14028-30]
