**Volume 14038**

Proceedings of SPIE 0277-786X, V. 14038

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Thermosense: Thermal Infrared Applications XLVIII*, edited by Peter Spaeth, Marc Genest, Giovanni Ferrarini, Proc. of SPIE 14038, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## ARTIFICIAL INTELLIGENCE AND NDE4.0 IN IRT I

---

- 14038 03 **Man versus machine (learning): active thermography for hidden damage detection in composites** [14038-2]
- 14038 04 **A novel thermographic sequence processing procedure for damage characterization in hybrid natural woven composites (Best Student Paper Award)** [14038-30]

---

## AEROSPACE APPLICATIONS

---

- 14038 05 **Damage detection of aircraft composites using thermographic NDT: towards an automated aircraft inspection approach** [14038-4]
- 14038 06 **Emissivity-corrected thermography for post landing aircraft wheel and brake cooling** [14038-5]

---

## RESEARCH AND DEVELOPMENT

---

- 14038 07 **Measuring the in-plane thermal diffusivity of thin foils: challenges in error analysis** [14038-7]
- 14038 08 **Arrayed thermal infrared sensors for automated heatmap generation** [14038-8]
- 14038 09 **High-temperature nonuniformity correction for thermography cameras** [14038-9]

---

## ARTIFICIAL INTELLIGENCE AND NDE4.0 IN IRT II

---

- 14038 0D **Physics-based autoencoder for coating characterization with pulse thermography (Invited Paper)** [14038-12]

---

## BUILDINGS AND CULTURAL HERITAGE APPLICATIONS

---

- 14038 0H **Machine learning image processing of raw thermal images recorded in situ on delicate works of art** [14038-18]

---

#### ADVANCED MANUFACTURING AND APPLICATIONS

---

- 14038 OJ **Detection and characterization of defects in the L-PBF process using infrared thermography and tomographic analysis** [14038-19]
- 14038 OK **Thermal inspection for the assessment of adhesively bonded metal adherends** [14038-21]
- 14038 OL **A conditional diffusion model for solving the ultrasonic inverse problem in trilayer adhesive structures** [14038-22]
- 14038 OM **Assessment of opportunities for fast dynamic infrared thermography for real-time in situ analysis** [14038-27]
- 14038 OO **In situ thermal imaging for quality classification of dissimilar metal laser welds in battery tab welding** [14038-20]

---

#### POSTER SESSION

---

- 14038 OP **A hybrid vision-language framework for infrared defect analysis on aerospace surfaces** [14038-6]
- 14038 OS **Chi-squared embedding to approximate low-rank representation of dynamic thermography for early breast cancer detection** [14038-25]
