

PROCEEDINGS OF SPIE

Photonics for Quantum 2026

Michael Reimer
Nir Rotenberg
Lindsay LeBlanc
Editors

8–11 June 2026
Waterloo, ON, Canada

Sponsored by
SPIE

Cosponsored by
Intlvac Thin Film (United States)
Delta Photonics Corporation (Canada)
Fibertech Optica Inc. (Canada)
TOPTICA Photonics, Inc. (United States)
Twin Paradox Laboratories (Canada)
Angstrom Engineering Inc. (Canada)

SPIE

Volume 14143

Proceedings of SPIE 0277-786X, V. 14143

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Photonics for Quantum 2026*, edited by Michael Reimer, Nir Rotenberg, Lindsay LeBlanc, Proc. of SPIE 14143, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

QUANTUM SPINS

- 14143 02 **Nanophotonic spin-photon interfaces for integrated quantum technologies** [14143-2]

QUANTUM DEFECTS

- 14143 03 **Spoof plasmonic resonators for enhanced microwave coupling in NV center quantum magnetometry** [14143-5]
- 14143 04 **Microwave-induced fluorescence of ensemble NV centers using PCB-based RF devices for quantum sensing** [14143-6]

ATOMIC QUANTUM OPTICS

- 14143 05 **Experimental investigation of relaxation for far-from equilibrium quantum many body system** [14143-7]
- 14143 06 **All-optical RF phase sensing with Rydberg atoms: a comparison of 3-photon transient and 4-photon closed-loop dynamics** [14143-8]

QUANTUM PHOTONIC SYSTEMS

- 14143 07 **Hybrid continuous-variable photonic QNNs for medical imaging under realistic Gaussian and readout constraints** [14143-11]

QUANTUM NETWORKS

- 14143 08 **Interfacing quantum dot single-photon emitters with cesium atomic vapor** [14143-16]

QUANTUM SENSING AND IMAGING

- 14143 09 **A quantum interferometer for high-resolution astronomical imaging** [14143-19]

PHOTON SOURCES

14143 0A **Electrical control of single nanowire quantum dots via multigate architectures** [14143-52]

INTEGRATED PHOTONICS

14143 0B **Reconfigurable photon-emitter interfaces enabled by nanomechanics (Invited Paper)**
[14143-32]

ENTANGLED PHOTONS

14143 0C **A fiber-based fully modular entangled-photon source architecture designed for scalable future quantum networks** [14143-36]

14143 0D **Efficient quantum hybrid entanglement with polarization-spatial coupling in telecom bands**
[14143-37]

PHOTONIC QUANTUM COMPUTING

14143 0E **Photon-subtracted two-mode squeezed thermal states in lossy quantum information processes** [14143-44]

14143 0F **Narrowband counter-propagation spontaneous parametric down conversion in a grating-based waveguide cavity** [14143-45]

POSTER SESSION

14143 0G **Digital twins for compact hybrid quantum-classical learning in FMCW radar detection**
[14143-46]

14143 0H **Predictive adaptive optics using pioneer beacons for satellite quantum communication**
[14143-47]

14143 0I **Progress towards a two-photon cesium clock** [14143-48]

14143 0J **Electrically addressable metal-organic framework optical crystals for tunable photonic components in quantum technologies** [14143-49]

14143 0K **Inverse design of bullseye cavities using tandem neural networks** [14143-56]

14143 0L **Development of an ultrahigh vacuum system for ultracold atoms in space** [14143-57]

14143 0M **Technology development for hybrid quantum inertial sensing in space** [14143-63]

14143 0N **Recovering Lorentzian resonances buried in noise using deep neural networks** [14143-67]

- 14143 0O **Representing non-Gaussian characteristics in spontaneous parametric down conversion**
[14143-69]
- 14143 0P **A technical overview of a weak coherent pulse source for satellite quantum key distribution with QEYSSat** [14143-70]
- 14143 0Q **Review of current state-of-the-art fiber arrays: capabilities and limitations for non-aficionados** [14143-73]
- 14143 0R **Photon precertification without feed-forward** [14143-103]
