Volume 14274

Proceedings of SPIE 0277-786X, V. 14274

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *International Conference on Wireless Communication Technology and Intelligent Signal Processing (WCISP 2026)*, edited by Yang Xiao, Maode Ma, Patrick Siarry, Proc. of SPIE 14274, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

INTERNATIONAL CONFERENCE ON WIRELESS COMMUNICATION TECHNOLOGY AND INTELLIGENT SIGNAL PROCESSING (WCISP 2026)

- 14274 02 **Multiscale feature fusion with spatial attention for robust defect classification in optical components** [14274-1]
- 14274 03 **Intelligent signal enhancement for low-SNR non-stationary time series: a wavelet-attention framework applied to financial signal processing** [14274-2]
- 14274 04 **Supervised contrastive learning for robust optical component defect classification under imaging degradation** [14274-3]
- 14274 05 **Adaptive frequency-domain filtering and noise-level estimation network for low-light image signal recovery** [14274-4]
- 14274 06 **Asymmetric cross-attention transformer for intelligent multisensor signal fusion and classification** [14274-5]
- 14274 07 **Intelligent bearing fault diagnosis under variable operating conditions via frequency-enhanced position encoding transformer** [14274-6]
- 14274 08 **Intelligent inertial signal denoising via spectral attention network for robust pose estimation** [14274-7]
- 14274 09 **A deep learning-inspired compressed sensing framework for sparse channel estimation in optical wireless communications** [14274-8]
- 14274 0A **WaveAttNet: a dual-branch wavelet-attention network for intelligent wireless communication signal recognition** [14274-9]
- 14274 0B **Uncertainty-aware selective prediction for reliable defect classification in optical component inspection** [14274-10]
- 14274 0C **Attention-enhanced visual sensing for autonomous UAV-based structural inspection** [14274-11]
- 14274 0D **Knowledge-distilled lightweight CNN for efficient optical component surface defect classification on edge devices** [14274-12]
- 14274 0E **AgriSenseNet: cross-modal signal fusion and intelligent processing for IoT-based multisensor environmental monitoring** [14274-13]

- 14274 OF **Research on helicopter flight attitude transmission method based on multisource fusion**
[14274-14]
- 14274 OG **Graph neural network-based multichannel sensor fusion for real-time helicopter attitude monitoring** [14274-15]
- 14274 OH **SPCNet: multiscale peak attention network for intelligent NIR spectral signal classification**
[14274-16]
- 14274 OI **Computation-driven software optimization for real-time wireless signal processing**
[14274-17]
- 14274 OJ **Research on high-dimensional statistical modeling methods for wireless signal detection**
[14274-18]
- 14274 OK **Efficient inference and computational optimization of large language models for intelligent signal processing** [14274-19]
- 14274 OL **A robust 3D spatial signal registration method for 3D point cloud registration based on manifold embedding and deep learning in complex environments** [14274-20]
- 14274 OM **Research on end-to-end machine learning-driven wireless communication encoding and decoding models** [14274-21]
