PROCEEDINGS OF SPIE

Optical Technologies for Telecommunications 2025

Anton V. Bourdine
Oleg G. Morozov
Albert Kh. Sultanov
Editors

5–7 November 2025
Ufa, Russian Federation

Organized by
Ufa University of Science and Technology (Russian Federation)
Kazan National Research Technical University (Russian Federation)
Povolzhskiy State University of Telecommunications and Informatics (Russian Federation)

Volume 14365

Proceedings of SPIE 0277-786X, V. 14365

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Optical Technologies for Telecommunications 2025*, edited by Anton V. Bourdine, Oleg G. Morozov, Albert Kh. Sultanov, Proc. of SPIE 14365, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

OPTICAL COMMUNICATION TECHNOLOGIES AND SYSTEMS

14365 02 **Comparative analysis of technologies for implementing the optical fronthaul in 5G networks** [14365-3]

14365 03 **Development of a method for reducing the PAPR for orthogonal access methods based on the use of forming filters in hybrid communication networks: Part I** [14365-7]

14365 04 **Development of a method for reducing the PAPR for orthogonal access methods based on the use of forming filters in hybrid communication networks: Part II** [14365-8]

PASSIVE AND ACTIVE OPTICAL COMPONENTS FOR FIBER OPTIC NETWORKS AND INFORMATION MEASURING SYSTEMS

14365 05 **Multicore fibers for future holographic-based communication systems** [14365-1]

14365 06 **Fabry-Perot sensing in the control loop: an energy-efficient hybrid NB-IoT/5G architecture** [14365-2]

14365 07 **Non-relational fiber optic device for fast switching of optical chirped signals/packages** [14365-9]

14365 08 **An approach to modeling a chiral structure with a graphene strip applied** [14365-12]

14365 09 **Modeling of a chiral optical waveguide taking into account the dispersion of macroscopic parameters** [14365-13]

14365 0A **Research on the fundamental principles of building a new generation radiophotonic radiometric systems** [14365-14]

14365 0B **Questions of dynamic change in the time of digital accumulation of output signals in a microwave photonic radiometric system** [14365-15]

14365 0C **Pilot in vivo verification of a fiber optic sensor** [14365-16]

14365 0D **Temperature sensitivity enhancement of the fiber Fabry-Perot interferometer using air-cavity-induced Vernier effect** [14365-18]

14365 0E **Instantaneous frequency of multiple microwave signals measurement system based on a double wideband discrete frequency packet** [14365-23]

ONE-DIMENSIONAL AND MULTI-DIMENSIONAL OPTICAL SIGNAL DATA PROCESSING

14365 0F **Holographic encoding of service sequences in hybrid communication systems of the fifth and sixth generations using low-orbital satellite and fiber optic systems** [14365-6]

14365 0G **Intelligent diffractive photonics: from precision laser synthesis to adaptive infocommunication systems and optical computing** [14365-10]

14365 0H **AI-driven beam shaping and laser synthesis of functional nanostructures for adaptive telecommunication systems** [14365-11]

14365 0I **Hybrid method for identification of speech signals acquired by a distributed fiber optic sensor** [14365-19]

MAINTENANCE, MONITORING, AND RESTORATION OF FIBER OPTIC NETWORKS

14365 0J **Identification of optical cables under group installation conditions** [14365-17]

14365 0K **Comparative analysis of the optical characteristics of fibers from various manufacturers** [14365-21]

14365 0L **Statistical analysis of insertion loss reproducibility for fusion splices between silica microstructured and telecommunication multimode optical fibers under fixed arc parameters** [14365-22]

ADVANCED TECHNOLOGIES OF OPTICAL COMMUNICATIONS

14365 0M **Single-pulse modulation and methods of its application** [14365-4]

14365 0N **Development of software for modeling optical and quantum communications** [14365-5]
