SPIE

Volume 14205

Proceedings of SPIE 0277-786X, V. 14205

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Physical Chemistry of Semiconductor Materials and Interfaces XXV*, edited by Minjung Son, Thomas R. Hopper, Proc. of SPIE 14205, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

ULTRAFAST DYNAMICS, INTERFACES, AND CHARGE TRANSFER I

14205 02 **Electric field-induced charge transfer in molecular materials for gigahertz optical modulation: a data-driven and machine learning approach (Invited Paper)** [14205-2]

ULTRAFAST DYNAMICS, INTERFACES, AND CHARGE TRANSFER II

14205 03 **Optically steering ultrafast carrier scattering, cooling, and trapping pathways in an atomically-thin semiconductor** [14205-6]

EXCITONIC MATERIALS AND MOLECULAR ORDERING

14205 04 **Controlling molecular packing structure and crystallinity of copper phthalocyanine using in situ spectroscopy** [14205-11]

POLARITONS AND LIGHT-MATTER COUPLING

14205 05 **Coherent and incoherent dynamics of exciton-polaritons (Invited Paper)** [14205-15]

14205 06 **Molecular polaritonics: liberating excitons by confined photons (Invited Paper)** [14205-17]

PEROVSKITE AND HYBRID SEMICONDUCTOR PHOTOPHYSICS: JOINT SESSION WITH CONFERENCES 14201 AND 14205

14205 07 **Controlling spin relaxation in 2D hybrid organic-inorganic semiconductors (Invited Paper)** [14205-22]

POSTER SESSION

14205 08 **AI-driven prediction of thermal transport and kinetic stability in indium-based intermetallic interfaces for semiconductor packaging** [14205-27]
